Problem Set Builder Notes - Flow cytometry and microscopy

7/10/2014

Document: SCB_ProblemSetBuilder_08

Page 2

- The edit and "Copy to other sample(s)" columns need to be more grayed out to indicate to users that they are unclickable until a histogram has been made/selected. (It is clear on page 5 when the grayed out icon is next to the green icon, but it is not clear on page 2 when the instructor only sees gray icons).
- Can you think of icons that can go in the buttons for select a histogram and draw a new one? I agree that the pencil looks more like draw a new histogram than edit a histogram, if you can think of a new edit icon. If you can think of icons for all three types of selections, then they can go in the pop up window too.

Page 3

- The buttons on the bottom should match one another. Since the button on the bottom left says "Save Selection & Edit", the button on the right should match and say "Save Selection". (Or they we just use "Save")
- Can you please define the color of the outline around a histogram in the hover state?

Page 4

- In the editing tools section, the icon to move the histogram should really only move it left/right (not also up/down). Can you update the icon appropriately?

Page 6

- We would like to add a select all button.

Page 3

- The "Copy to other sample(s)" column needs to be more grayed out to indicate to users that it is unclickable until at least one image has been selected for a particular sample.

Page 4

- Could the position of the Clear All and Select All buttons be rearranged - maybe to side-by-side instead?
- Question text has been updated - see Ver5 sketches
